

50cm prime focus receiver (300-900 MHz)

This is a wide band 2-channel system covering a range from 300 to 900 MHz. Be aware that there is also a lot of RFI in this range. The system can be used for continuum, pulsar and VLBI observations

Calibration Information

Frequency [GHz]	Channel	Polarisation	Tcal [K]	Tsys [K]	Sensitivity [K/Jy]	SEFD [Jy]	Aperture Eff. [%]	TMB/S [K/Jy]	Main Beam Eff. [%]	FWHM [arcsec]	Last update
0.61	A	LCP	12.5	320	1.3	246	45.8			1450	May 2011
normalized Gain curve ($G = A0 + A1 \cdot Elv + A2 \cdot Elv^2$)							Observed in	confirmed			
A0 = 1.0		A1 = 0.0		A2 = 0.0		May 2011					

Comments:

- Preliminary data - more testing needed!

Version description for OBSINP

RX Name	Wavelength [cm]	Frequency (center) [GHz]	Nr. of Horns
P500mm (300-900 MHz)	92.0-32.0	0.3-0.9 (0.6)	1
Version:	Comment		
1. Continuum (BW: 80 MHz)	Narrow Band Continuum		
2. Pulsar (BW: 600 MHz)	Pulsar 600 MHz BW Version		
Horn offsets [arcsec]	0.0, 0.0		

Channel assignment in the MBFITS data files

Note that the narrow line and VLBA IF channels are usually only available when the specific line version of the receiver was selected. In addition for most receivers with narrow line channels the cables at the patch board need to be connected by the receiver group.

To select different channel numbers in OBSINP, the online plot, or the toolbox the numbers have to be specified like c(1)+c(2) to add channel 1 and 2. E.g. channel 1 and 2 contain the LCP and RCP broadband channels, then "OnlPlot pen='c(1)+c(2)'" or "toolbox use='c(1)+c(2)'" will select these channels. In OBSINP the pen can be directly specified in the receiver selection menu.

Abbreviations:

SB: narrow band channel (Schmalband-Kanal), 100 MHz band width

BB: digital broad band channel (Breitband-Kanal), band width varies for different receivers

VLBA: VLBA IF, 500 MHz band width

BW: band width

TP: total power

50cm PFK (300-900MHz)			
Channel	IF	Pol.	Comment
1	SB	LCP	TP A
2	SB	RCP	TP B

Tcal and Tsys measurements
