

2cm double beam secondary focus receiver (12000-18000 MHz)

This receiver replaced the old 2cm secondary focus system. It is a two horn system for continuum, spectroscopy and VLBI observations. The system is currently tested and all values are preliminary.

Note, that for technical reasons, no spectroscopic frequency-switch observations are possible!

Comments:

- Note that the system temperature at this frequency depends strongly on weather conditions!
- Zenith tau values can range from ??? to ???.

Version description for OBSINP

RX Name	Wavelength [cm]	Frequency (center) [GHz]	Nr. of Horns
S20mm Double Beam RX	2.0	12.0-18.0 (15.0)	2
Version:	Comment		
1. Continuum (BW: 2 GHz)	Broad Band Continuum		
Horn offsets [arcsec]	Horn 1:TBD; 2:TBD		

Receiver Bands

The receiver delivers the data in two 2.5GHz-wide IF-subbands, which can be shifted in to cover the 12-18 GHz range.

Spectroscopy modes and resolution

Low-res mode (2 basebands for each of 2 feeds and 2 polarizations)

Note, that due to technical reasons the LSR correction has to be applied via software (regridding). This will decrease the effective spectral resolution to some degree.
