

Current Status of the observational system

Last update: see bottom right

Receivers currently installed at the prime focus:

| Receiver | Status |
|----------|--------|
| P210-7 | ok |
| P200/180 | ok |

Please note, that there is new strong RFI at ~1475 MHz, influencing also the protected band. The staff of the observatory is currently investigating possible measures.

Receivers currently available in the secondary focus:

| Receiver | Status |
|----------|--|
| S130 | ok |
| S110 | ok, wider bandwidth with the new EDD system - please contact staff |
| S60 | ok, only one horn available |
| S45 | ok |
| S36 | ok |
| S28 | ok |
| S20 | ok |
| S14 | ok |
| S7 | ok |

The S-band has recently heavily been occupied by RFI (due to LTE). Observations with the 11cm-receiver should use the 8-bank polarimeter or the new spectro-polarimeter (please contact staff).

For questions about the scheduling please contact **sched100m@mpifr-bonn.mpg.de**.
For other questions or comments, please contact **eff-support@mpifr-bonn.mpg.de**.
Please also report RFI to the same email address.
