

There is a new setup for performing observations at the 100m telescope. We disabled direct access to the control system computer. (Remote-)Observing is done via two vncservers on the computer **observer2** (account vncuser) and the account **obseff@observer2**. Passwords are changed frequently, ask the telescope operators for details. The obseff@observer2 account is used to store needed scripts for observations. The telescope is controlled via the vncserver:
