Current Status of the observational system

Last update: see bottom right

Receivers currently installed at the prime focus:

| Receiver | Status |
|----------|--------|
| P210-7 | ok |
| P200/180 | ok |

Please note, that there is new strong RFI at \sim 1475 MHz, influencing also the protected band. The staff of the observatory is currently investigating possible measures.

Receivers currently available in the secondary focus:

| Receiver | Status |
|------------|-----------------------------|
| S130 | ok |
| S110 | ok, but beware of RFI |
| S60 | ok, only one horn available |
| S45 | ok |
| S36 | ok |
| S28 | ok |
| S20 | ok |
| S14 | ok |
| S 9 | not available any more |
| S 7 | ok |

The S-band has recently heavily been occupied by RFI (due to LTE). Observations with the 11cm-receiver should use the 8-bank polarimeter or the new spectro-polarimeter (please contact staff).

For questions or comments, please contact **eff-support[at]mpifr-bonn.mpg.de**. Please also report RFI to the same email address.
